Hi Medi,

I'm sure you're aware of all the publicity about the "radioactive island", but I'm hopeful you will be able to answer a brief question. The latest article I saw in the SF Examiner had a statement that I'd like you to clarify.

The paragraph I'd like more information on is as follows:

Recent stories in the Bay Citizen and East Bay Express have documented new cases of previously unrevealed contamination and produced ample anecdotal evidence of high levels of cancer among long-time residents of the island.

Read more at the San Francisco Examiner: <http://www.sfexaminer.com/local/2012/09/contamination-reports-treasure-island-spur-hearing-safety#ixzz26TakJr8s>

I don't need a response regarding the "anecdotal evidence" but is there documentation of "previously unrevealed contamination"? If so, where can I locate it? I briefing EPA management at 3:00 PM on Monday, so I hope to hear from you before then. Are you planning to attend the Navy's community meeting on Tuesday?

Thanks,

David Stensby
US EPA Region 9
